Programming Paradigms 2023
Session 1 : Introduction to the course and to Haskell

Preparing for the session

Hans Hüttel

5 September 2023

Tuesday 5 September 2023 – Introduction to the course and to Haskell

This session is intended as an introduction to the course and to the teaching format.

Learning goals for the session

The learning goals are that you should be able to

- To be able to install the Glasgow Haskell compiler and use it with a simple programming environment

- To be able to edit, load and use simple Haskell programs

How you should prepare before we meet on Tuesday

- See if you can install Haskell. The instructions are available from the course page on Moodle.

- Watch the video available from Moodle for this session. It has a first, short introduction to functional programming.

What happens on Tuesday?

- We first meet in the lecture theatre Aud. B at Fibigerstræde 15 at 12:30 for an introduction to the course.

- After this introduction, we walk together to Kroghstræde 7 and there will be a fairly long break during which you can buy the textbook. We will use rooms 59 (for all SW students) and 61 (for all DAT and CS-IT students) for this (short!) part of the session.

Problems for Tuesday

For the session at Kroghstræde 7 we will solve and discuss a collection of problems that can be found on a separate page, available on the day of the session.
